The final form of the dashboard and some of the data extracted from Excel

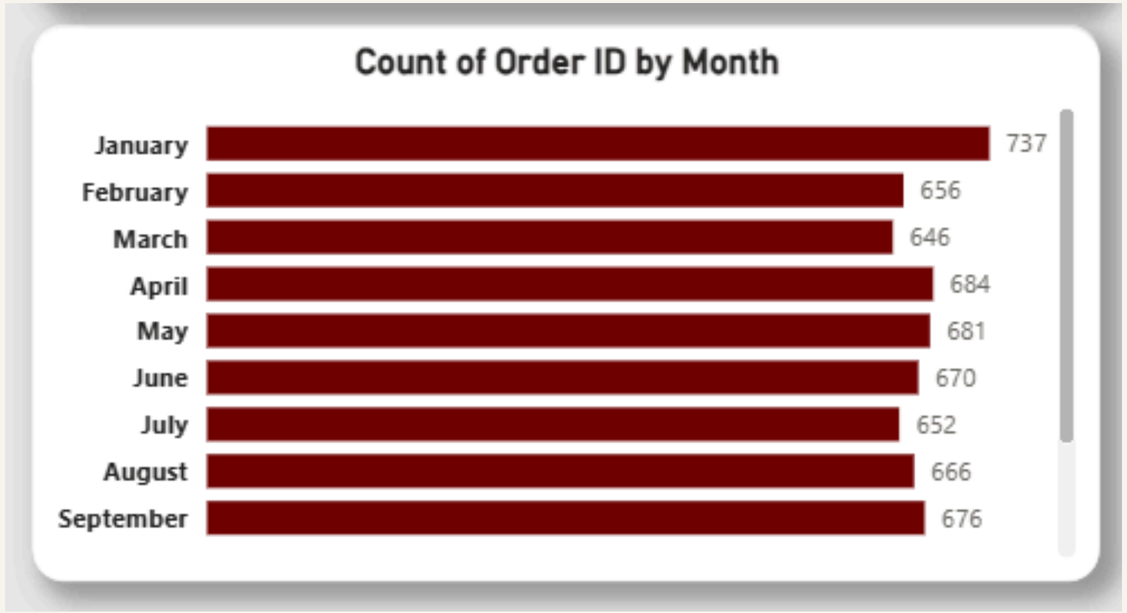

The distribution of costs (or returns) by country is shown here. We note that Saudi Arabia tops the list with the highest value (1.40 million), followed by the United States (1.00 million), indicating that the Saudi market is the main engine of financial performance today.

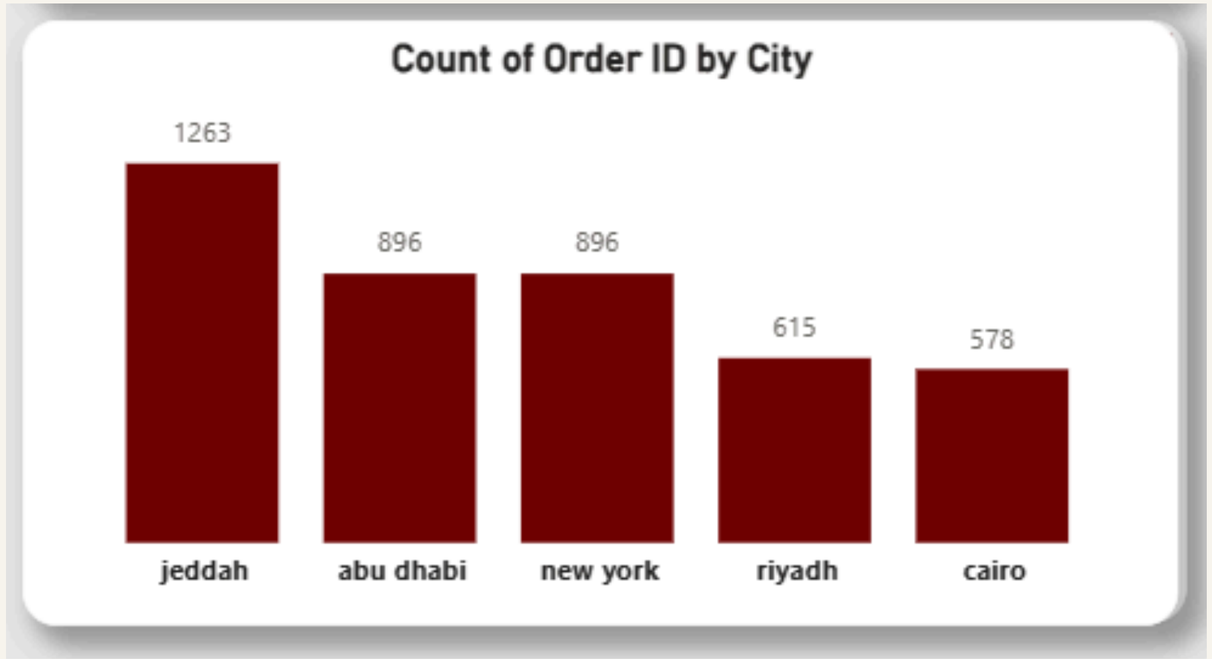

- X-axis: Category
- Y-axis: Count of Order ID

This chart shows the most requested categories. We find a great convergence in performance between categories, but tablets and laptops are the most in demand, which shows customers' orientation towards technical and productivity devices.

- X-axis: Country
- Y-axis: Sum of Total Cost

Here we monitor the stability of sales throughout the year. January recorded the highest order rate (737 orders), while the rest of the months show remarkable stability around the 650-680 order barrier, which means a continuous flow of operations without sharp fluctuations.

. X-axis: Count of Order ID
· Y-axis: Month

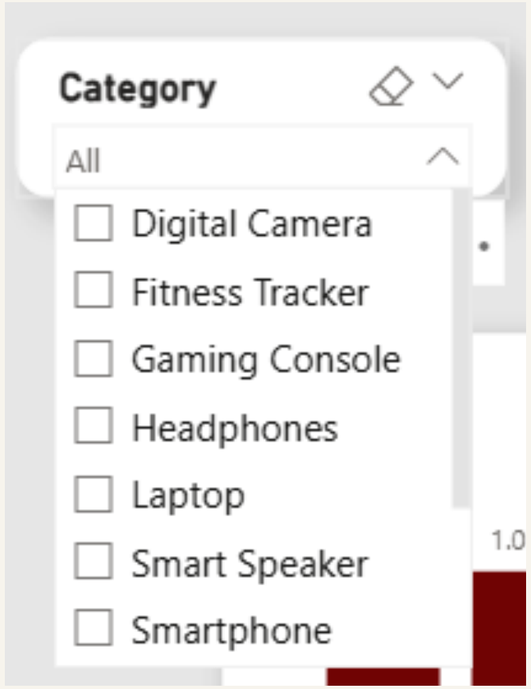

This chart shows the most vibrant cities. The city of Jeddah leads by a large margin (1,263 applications), followed by Abu Dhabi and New York almost equally. This helps us direct marketing and logistics campaigns towards cities with high purchasing intensity.

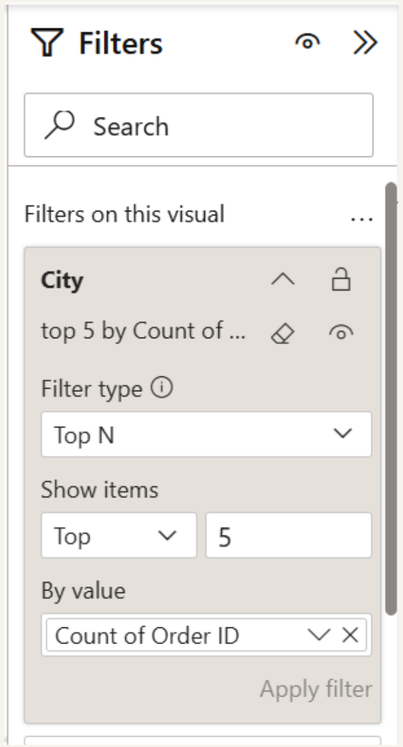

. X-axis: City
· Y-axis: Count of Order ID

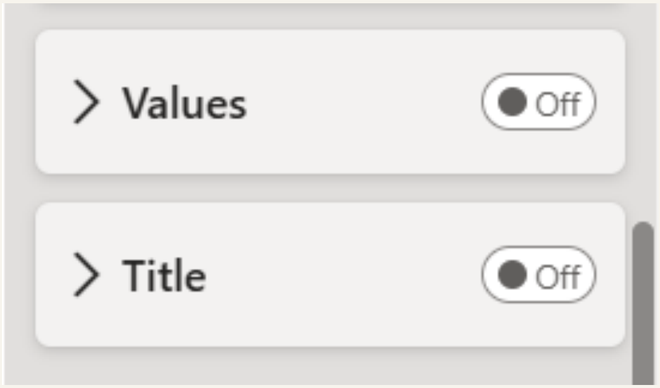

The geographical scope and size of operations for requests. We have a presence in 7 countries across 17 different cities, and we have completed 7,997 orders. This reflects a wide customer base and high operational activity.

An interactive filter (Slicer) in the dashboard; allows the user to choose a specific product category (such as Laptop or Smartphone) to display their data only in all Dashboard fees.

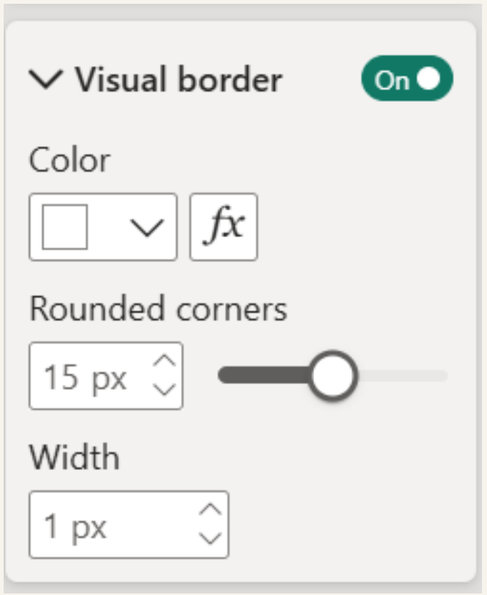

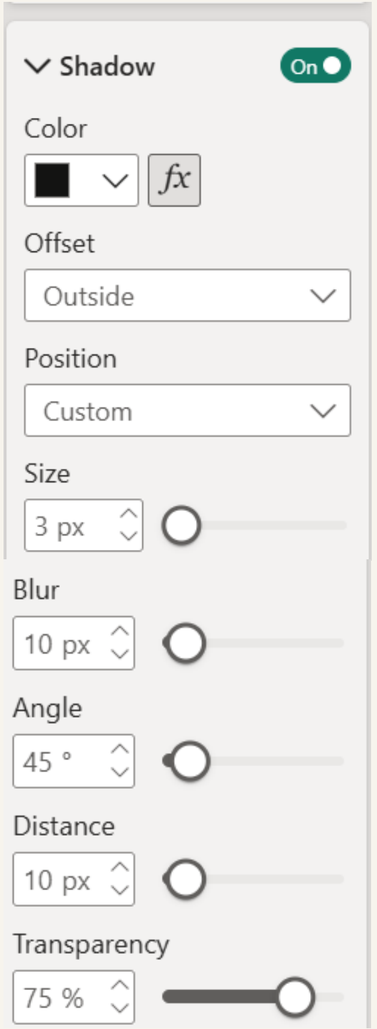

Filter for the city to show the best 5
